

Create a rake task with rails and heroku

I will use the example of cleaning a chat every day Create a file called chat.rake in /lib/tasks

```
namespace :chat do
  task clear_history: :environment do
    oldest_chats = Chat.where("created_at < ?", 15.days.ago)
    for chat in oldest_chats
      chat.delete
    end
  end
end
```

Run code below from terminal

```
$ rake chat:clear_history
```

This should do what the method should do On Heroku: Add Heroku Scheduler

Add new job

Choose day, time etc and the command from above

and thats it !!
