

# Responsive Line Breaks

---

If you create responsive designs, you always cross the problem to breake a line in the mobil view.

Here are 2 Techniques to use.

1. Add a `<br />` with a class of *line-break*, set it to `display: none;` in the base styles and in a smaller device set it to `display: block;`.
2. Wrap each line in a `<span></span>` with a class of *line-break*, set it to `display: inline;` in the base styles and in a smaller device set it to `display: block;`
