

Helper for controllers in Rails

Keep your Rails controllers skinny!!

Yeahh, but how?

Create the folder 'services' in the app folder.

Create a new file in the folder.

Example: user_service.rb

Add to the file code below.

```
module ServiceUser  
  
end
```

Add your method in the file.

In the controller include the service like below and call your method where you want.

```
class WelcomeController < ApplicationController  
  include ServiceUser  
  
  ....  
  ....  
  ....  
  
end
```

and thats it !!
