

# Rspec test with Ajax in controller

---

Do you have to test a controller with xhr request?

This is an example of my controller

```
def create
  if request.xhr?
    ....
    ....
  end
end
```

My rspec Add xhr: true to test

```
it "creates a ....." do
  post :create, xhr: true, params {.....}
  expect(.....).to eq ...
end
```

and thats it !!
