

# ActiveRecord and find or where

---

If you use `.find()` or `.where(id: ....)`

If the primary key is an integer find by id and where id coerces its arguments using `to_i`

that means:

```
2.7.2 :001 > '9898798-user_name'.to_i  
=> 9898798  
2.7.2 :002 >
```

```
Person.find(1)  
=> returns object for id 1  
Person.find('1')  
=> returns object for id 1  
Person.find('1-this-user')  
=> returns object for id 1
```
