

# Capybara Selenium WebDriver running at a lower speed

---

Add code below to test\_helper.rb

```
if ENV["SLOW"].present?  
  require "selenium-webdriver"  
  module ::Selenium::WebDriver::Remote  
    class Bridge  
      alias old_execute execute  
      def execute(*args)  
        sleep(0.1)  
        old_execute(*args)  
      end  
    end  
  end  
end  
end
```

Then call rspec with **SLOW=1** in the command line

Example:

```
SLOW=1 rspec
```
