

Tests and devise login

If you have a rails app with login functions, in some point you need to write tests that logs the user in before you can do other tests.

The devise Docs have a good solution:

```
RSpec.configure do |config|  
  config.include Warden::Test::Helpers  
end
```

Add this to spec/rails_helper

And then in any place you need to login just do:

```
login_as(FactoryBot.create(:user))
```
